Overview

1.1 Scope
This guide is intended for properly trained service personnel and technicians who need to install the following Arista Networks Data Center Switches:

<table>
<thead>
<tr>
<th>Model</th>
</tr>
</thead>
<tbody>
<tr>
<td>CCS-720XP-48ZC2</td>
</tr>
<tr>
<td>CCS-720XP-24ZY4</td>

Important! Only qualified personnel should install, service, or replace this equipment.

Seul le personnel qualifié doit installer, service, ou remplacer cet équipement.

1.2 Receiving and Inspecting the Equipment
Upon receiving the switch, inspect the shipping boxes and record any external damage. Retain packing materials if you suspect that part of the shipment is damaged; the carrier may need to inspect them.

If the boxes were not damaged in transit, unpack them carefully. Ensure that you do not discard any accessories that may be packaged in the same box as the main unit.

Inspect the packing list and confirm that you received all listed items. Compare the packing list with your purchase order. Appendix B provides a list of components included with the switch.

1.3 Installation Process
The following tasks are required to install and use the switch:

Step 1 Select and prepare the installation site (Section 2.1).
Step 2 Assemble the installation tools listed (Section 2.2).
Step 3 Attach the mounting brackets and install the switch in an equipment rack (Chapter 3).
Step 4 Connect the switch to the power source and network devices (Chapter 4).
Step 5 Configure the switch (Chapter 5).
Important! Class 1 Laser Product: This product has provisions to install Class 1 laser transceivers which provide optical coupling to the communication network. Once a Class 1 laser product is installed, the equipment is a Class 1 Laser Product (Appareil à Laser de Classe 1). The customer is responsible for selecting and installing the Class 1 laser transceiver and for insuring that the Class 1 AEL (Allowable Emission Limit) per EN/IEC 60825, CSA E60825-1, and Code of Federal Regulations 21 CFR 1040 is not exceeded after the laser transceiver have been installed. Do not install laser products whose class rating is greater than 1. Refer to all safety instructions that accompanied the transceiver prior to installation. Only Class 1 laser devices, certified for use in the country of installation by the cognizant agency are to be utilized in this product.

Produit Laser de classe 1: Ce produit a des dispositions pour installer des émetteurs-récepteurs de laser de classe 1 qui offre de couplage au réseau de communication optique. Une fois un produit laser de classe 1 est installé, l'équipement est un produit Laser de classe 1 (Appareil à Laser de Classe 1). Le client est responsable pour sélectionner et installer l'émetteur/récepteur de laser de classe 1 et pour assurer que la classe 1 AEL (limite d'émission admissible) par EN/IEC 6-825, CSA E60825-1, et Code des règlements fédéraux 21 CFR 1040 ne soit pas dépassée après avoir installé l'émetteur/récepteur de laser. Ne pas installer des appareils à laser dont la cote de classe est supérieure à 1. Voir toutes les consignes de sécurité qui ont accompagné l'émetteur-récepteur avant l'installation. Seuls appareils laser de classe 1 certifiés pour une utilisation dans le pays d'installation par l'organisme compétent doivent être utilisées dans ce produit. Ultimate disposal of this product should be in accordance with all applicable laws and regulations.

Important! Ultimate disposal of this product should be handled in accordance with all national laws and regulations.

1.4 Safety Information
Refer to the Arista Networks document Safety Information and Translated Safety Warnings available at:

1.5 Obtaining Technical Assistance
Any customer, partner, reseller or distributor holding a valid Arista Service Contract can obtain technical support in any of the following ways:

- **Email**: support@arista.com. This is the easiest way to create a new service request.
  Include a detailed description of the problem and the output of “show tech-support”.

  A support case may be created through the support portal on our website. You may also download the most current software and documentation, as well as view FAQs, Knowledge Base articles, Security Advisories, and Field Notices.

- **Phone**: +1 866-476-0000 or +1 408-547-5502.

Important! No user serviceable parts inside. Refer all servicing to qualified service personnel.

1. Excluding PoE Power.
2.1 Site Selection

The following criteria should be considered when selecting a site to install the switch:

- **Temperature and Ventilation**: For proper ventilation, install the switch where there is ample airflow to the front and back of the switch. The ambient temperature should not go below 0° or exceed 40°C.

---

**Important!** To prevent the switch from overheating, do not operate it in an area where the ambient temperature exceeds 40°C (104°F).

---

- **Airflow Orientation**: The CCS PoE switches support only front-to-back airflow direction. If the airflow direction is not compatible with the installation site, contact your sales representative.

- **Rack Space**: Install the switch in a 19" rack or cabinet. The switch height is 1 RU. The accessory kit provides mounting brackets for two-post and four-post racks.

  When mounting the switch in a partially filled rack, load the rack from bottom to top, with the heaviest equipment at the bottom. Load the switch at the bottom if it is the only item in the rack.

- **Power Requirements**: Power requirements vary by switch and power supply model. Refer to Table 1-3 on page 3 and Table 1-5 on page 3 for information regarding your specific system.

  Two circuits provide redundancy protection. Section 4.1 describes power cable requirements.

---

**Important!** The power input plug-socket combination must be accessible at all times; it provides the primary method of disconnecting power from the system.

---

- **Other Requirements**: Select a site where liquids or objects cannot fall onto the equipment and foreign objects are not drawn into the ventilation holes. Verify these guidelines are met:
  - Clearance areas to the front and rear panels allow for unrestricted cabling.
  - All front and rear panel indicators can be easily read.
  - Power cords can reach from the power outlet to the connector on the rear panel.
Important! All power connections must be removed to de-energize the unit.

Toutes les connexions d’alimentation doivent être enlevées pour hors tension l’appareil.

### 2.2 Tools and Parts Required for Installation

Each switch provides an accessory kit that contains parts that are required to install the switch. In addition to the accessory kit, the following tools and equipment are required to install the switch:

**Two-Post Rack**
- Screws or rack mounting nuts and bolts.
- Screwdriver

**Four-Post Rack (Tool-less)**
No additional equipment required.

**Four-Post Rack (Conventional)**
- Screws or rack mounting nuts and bolts.
- Screwdriver

Accessory kit does not include screws for attaching the switch to the equipment rack. When installing the switch into an equipment rack with unthreaded post holes, nuts are also required to secure the switch to the rack posts.

### 2.3 Electrostatic Discharge (ESD) Precautions

Observe these guidelines to avoid ESD damage when installing or servicing the switch.

- Assemble or disassemble equipment only in a static-free work area.
- Use a conductive work surface (such as an anti-static mat) to dissipate static charge.
- Wear a conductive wrist strap to dissipate static charge accumulation.
- Minimize handling of assemblies and components.
- Keep replacement parts in their original static-free packaging.
- Remove all plastic, foam, vinyl, paper, and other static-generating materials from the work area.
- Use tools that do not create ESD.
Rack Mounting the Switch

Important! The rack mounting procedure is identical for all switches covered by this guide. Illustrations in this chapter depict the mounting of a DCS-7010T-48 switch.

Les procédure de montage du bâti est identique pour tous les commutateurs visés par ce guide. Illustrations dans ce chapitre montrent le montage d'un interrupteur de DCS-7010T-48.

- Section 3.1 provides instructions for mounting the switch in a two- or four-post rack.

After completing the instructions for your rack type, proceed to Chapter 4.

Note Illustrations use a representative Arista switch. Your device may be different in appearance.

3.1 Two- or Four-Post Rack Mount

The switch can be installed in a two- or four-post rack. The installation process is identical because the switch attaches to only two posts of a rack. To mount the switch in a rack, assemble the mounting brackets to the chassis, then attach the brackets to the rack posts. Rack mount accessory kits include the following parts:

- 2 x mounting brackets
- 6 x M4x5 flat head Phillips screws.

Figure 3-1 displays proper bracket placement for rack mount.

Figure 3-1: Bracket Mount Placement for Rack Mount
3.1.1 Attaching Mounting Brackets to the Chassis

This procedure attaches mounting brackets to the switch chassis (Figure 3-2).

**Step 1** Align the mounting brackets with the chassis holes at the front of the switch.

**Step 2** Attach the brackets with two M4x5 flat head Philips screws.

*Figure 3-2: Bracket Mount Attachment to Switch*

3.1.2 Inserting the Switch into the Rack

This procedure attaches the switch to the rack (Figure 3-3).

**Step 1** Lift the chassis into the rack. Position the flanges against the rack posts.

**Step 2** Select mounting screws that fit your equipment rack.

**Step 3** Attach the bracket flanges to the rack posts.

*Figure 3-3: Inserting the Switch into the Rack*

After completing the rack mount, proceed to Chapter 4.
4.1 Grounding the Switch

After mounting the switch into the rack, connect the switch to the data center ground. Figure 4-1 displays the location of the grounding pads located on the left of the rear panel.

Important! Grounding wires and grounding lugs (M4 x 0.7) are not supplied. Wire size should meet local and national installation requirements. Commercially available 6 AWG wire is recommended for installations in the U.S.

À la terre et de mise à la terre fils cosses (M4 x 0.7) ne sont pas fournis. Calibre des fils doit satisfaire des exigences de l’installation locale et nationale. Disponible dans le commerce 6 fils AWG est recommandé pour les installations aux États-Unis.

4.2 Connecting Power Cables

Note
Power cords are optional and must be ordered separately. You must use an approved power cord compliant with local and national electrical codes or order one from Arista for use with the device.

Important!
Installation of this equipment must comply with local and national electrical codes. If necessary, consult with the appropriate regulatory agencies and inspection authorities to ensure compliance.

Installation de cet équipement doit être conformes aux codes électriques locaux et nationaux. Si nécessaire, consulter les organismes de réglementation appropriés et des autorités de contrôle pour assurer la conformité.

The switch operates with two installed power supplies. At least one power supply must connect to a power source. Two circuits provide redundancy protection. Appendix D displays the location of the power supplies on the rear panel of the switch.

Important!
Read all installation instructions before connecting the system to the power source.

Lire toutes les instructions d’installation avant de brancher le système à la source d’alimentation.

• Non-Redundant Configuration: Connect power to either of the two power supplies.
• Redundant Power Supply Configuration: Connect power to both power supplies.
• Power down the Switch: Remove all power cords and wires from the power supplies.

Important!
This equipment must be grounded. Never defeat the ground conductor.

Cet équipement doit être mis à la terre. Ne jamais modifier le conducteur de terre.

Important!
This unit requires overcurrent protection.

Cet appareil requiert une protection contre les surintensités.

4.2.1 AC Power Supplies
The following AC power supplies are supported.

• PWR-621-AC-RED
• PWR-1021-AC-RED

Figure 4-3 displays an AC power supply, including the power connector (C16) on the right side of the module. The AC power supply connects to a circuit that provides the required power, as specified by Table 1-5 on page 3.
4.2.2 DC Power Supplies

The following DC power supplies are supported.

- PWR-721-DC-RED

*Figure 4-3* displays a DC power supply.

*Figure 4-3: DC Power Supply (PWR-721-DC-RED)*

---

**Important!** A disconnect device must be provided as part of the installation.

Un dispositif de sectionnement doit être fourni dans le cadre de l'installation.
Important! Ensure power is removed from DC circuits before performing any installation actions. Locate the disconnect device, circuit breakers or fuses on DC power lines servicing the circuits. Turn off the power line circuits or remove the fuses.

Important! Wire size must comply with local and national requirements and electrical codes. Use only copper wire.

Important! Apply ground connection to the switch first during installation and remove last when removing power.

4.2.2.1 Wire and Lug Preparation

Before performing any installation actions, ensure power is removed from DC circuits by turning off the power line servicing the circuits. Prepare the stranded wiring before you begin a DC power installation.

Note Stranded copper wiring is required and should meet local and national installation requirements. Wires and grounding lugs are not supplied.

4.2.2.2 Connecting a DC Power Supply to Power Source

To connect a DC power supply to power source:

**Step 1** Prepare the stranded wiring (Wire and Lug Preparation).

**Step 2** Attach the appropriate lugs to the source DC wires.

**Step 3** Connect the DC-input wires to the appropriate terminals using the specified torque (Table 4-1) in the following order.

**Note**

Remove terminal covers as needed.

- a. Ground wire to the Protective Earth (PE) terminal.
- b. Negative source DC cable to the negative (- / -48V) terminal.
- c. Positive (+) source DC cable to the positive (+ / Rtn) terminal.

**Important!**

Ensure power is removed from DC circuits before performing any installation actions. Locate circuit breakers or fuses on DC power lines servicing the circuits. Turn off the power line circuits or remove the fuses.

**Important!**

Wire size must comply with local and national requirements and electrical codes. Use only copper wire.

Calibre doit respecter les exigences locales et nationales et les codes de l’électricité. Utiliser seulement du fil de cuivre.
Important! Apply the ground connection first during installation and remove last when removing power.

Step 4 Replace the terminal covers as required.

4.3 Connecting Serial and Management Cables

The accessory kit includes the following cables:

- RJ-45 to DB-9 serial adapter cable.
- RJ-45 Ethernet cable.

Table 4-2 lists the pin connections of the RJ-45 to DB-9 adapter cable.

Note RJ-45 to DB-9 connections: For the console management port on the rear panel, RJ-45 pin 1 (RTS) is connected to RJ-45 pin 8 (CTS); RJ-45 pin 2 (DTR) and RJ-45 pin 7 (DSR) are not electrically connected to any signal.

Figure 4-5 displays management ports on the rear panel of the CCS PoE switches. Appendix C and Appendix D display the front and rear panels of all switches covered by this guide.

Figure 4-5: Rear Panel Management Ports
Connect management ports as follows:

- **Console (Serial) Port**: Connect to a PC with the RJ-45 to DB-9 serial adapter cable. The switch uses the following default settings:
  - 9600 baud
  - No flow control
  - 1 stop bit
  - No parity bits
  - 8 data bits

- **Ethernet Management Port**: Connect to 10/100/1000 management network with RJ-45 Ethernet cable.

- **USB Port**: The USB port may be used for software or configuration updates.

---

**Caution**

Excessive bending can damage interface cables, especially optical cables.

Flexion excessive peut endommager les câbles d'interface, notamment des câbles optiques.
Chapter 5

Configuring the Switch

Arista switches ship from the factory in Zero Touch Provisioning (ZTP) mode. ZTP configures the switch without user intervention by downloading a startup configuration file or a boot script from a location specified by a DHCP server. To manually configure a switch, ZTP is bypassed. The initial configuration provides one username (admin) accessible only through the console port because it has no password.

When bypassing ZTP, initial switch access requires logging in as admin, with no password, through the console port. Then you can configure an admin password and other password protected usernames.

This manual configuration procedure cancels ZTP mode, logs into the switch, assigns a password to admin, assigns an IP address to the management port, and defines a default route to a network gateway.

Step 1  Provide power to the switch (Section 4.1).

Step 2  Connect the console port to a PC (Section 4.3).

As the switch boots without a startup-config file, it displays the following through the console:

`The device is in Zero Touch Provisioning mode and is attempting to download the startup-config from a remote system. The device will not be fully functional until either a valid startup-config is downloaded from a remote system or Zero Touch Provisioning is cancelled. To cancel Zero Touch Provisioning, login as admin and type 'zerotouch cancel' at the CLI.`

localhost login:

Step 3  Log into the switch by typing admin at the login prompt.

localhost login:admin

Step 4  Cancel ZTP mode by typing zerotouch cancel. IMPORTANT: This step initiates a switch reboot.

localhost>zerotouch cancel

Step 5  After the switch boots, log into the switch again by typing admin at the login prompt.

Arista EOS
localhost login:admin
Last login: Fri Mar 15 13:17:13 on console

Step 6  Enter global configuration mode.

localhost>enable
localhost#config
Step 7  Assign a password to the admin username with the username secret command.

```
localhost(config)#username admin secret pxq123
```

Step 8  Configure a default route to the network gateway.

```
localhost(config)#ip route 0.0.0.0/0 192.0.2.1
```

Step 9  Assign an IP address (192.0.2.8/24 in this example) to an Ethernet management port.

```
localhost(config)#interface management 1
localhost(config-if-Ma1/1)#ip address 192.0.2.8/24
```

Step 10 Save the configuration by typing write memory or copy running-config startup-config.

```
localhost#copy running-config startup-config
```

When the management port IP address is configured, use this command to access the switch from a host, using the address configured in step 9:

```
ssh admin@192.0.2.8
```

Refer to the Arista Networks User Manual for complete switch configuration information.

A.1 Front Indicators

A.1.1 Switch Indicators

Front panel LEDs are located on the right side of the chassis and display system, fan, and power supply status. The front panel LEDs are labeled as in Figure A-1 for a representative switch.

### A.1.2 Port Indicators

Port LEDs, located in the vicinity of their corresponding ports, provide link and operational status. **Figure A-2** displays the Port LED location on the DCS-7050QX-32S switch.

#### A.2 Rear Status Indicators

Fan and power supply modules are accessed from the rear panel. Each fan and power supply module contains an LED that reports the module status.

Fan Status LEDs are on the fan modules, as displayed in Figure A-3.

**Note**
You can narrow down the error condition by logging in to the switch to view the specific device state. Refer to the Arista User Manual’s *Switch Environment Control* chapter, under the topic *Viewing Environment Status*, for further information on the `show environment` commands.
Each switch provides an accessory kit that contains parts that are required to install the switch. This appendix lists the installation parts contained in the switch accessory kit.

Rear Panel

All switches covered by this guide use one of the rear panels shown below.

Note

Depending on the installed power supply and fan modules, the appearance could be different from those shown.

Appendix E

Maintenance and Field Replacement

E.1 Considerations

- All fans and power supplies are hot swappable.
- The switch can be running while a power supply is being installed or removed, but the power supply being replaced must not be connected to a power source.

Note

- Saving the switch configuration before replacing a power supply is recommended.
- All slots must be filled or covered with a blank for operation (even though power supply or fans may not be functional).

Note

Refer to the front (Appendix C) and rear (Appendix D) panel illustrations of your device to locate the appropriate LED, the release lever or handle, and the handle for the power supply and fan modules.

E.2 Power Supplies

The following steps are required when removing power supplies from a switch.

E.2.1 AC Power Supplies

E.2.1.1 Removing an AC Power Supply

Step 1 Ground yourself with an ESD wrist strap.
Step 2 Power down the power supply to be removed by disconnecting the AC power cable.
Step 3 Push the power supply release lever and remove the power supply.

E.2.1.2 Installing an AC Power Supply

You must make space for installing the power supply by removing an existing one (Section E.2.1.1).

Step 1 Remove the replacement power supply from its packaging.
Step 2 Slide the new power supply into the empty slot.
Step 3  Slide the new power supply into the switch until the power supply is fully seated and the release lever snaps into place.

Step 4  Connect the power cord to the power supply.

Step 5  Verify the LED(s) on the power supply.

Note  The Power Supply status LED should be a steady green for normal operation.

Step 6  Verify the new power supply operation by issuing the `show environment power` command.

```
switch#show environment power
```

The output of the command will list the power supplies in operation and should include the one you replaced.

### E.2.2  DC Power Supplies

Note  Use a three-eighth inch (3/8") hexagon-socket wrench for removing the lug nuts.

#### E.2.2.1  Removing a DC Power Supply

Before performing any of the steps, ensure power is removed from DC circuits by turning off the power line servicing the circuits.

Note  Make sure to remove the ground connection last when removing power.

Step 1  Put on a grounded, anti-static ESD strap.

Step 2  Disconnect the power cable from the DC power source.

Step 3  Access the terminal studs by lifting the plastic cover.

Step 4  Remove the flange locking nuts to each of the terminal studs.

Step 5  Disconnect the power cable lug from the terminal studs.

Step 6  Use the power supply release lever to unseat and slide out the power supply.

#### E.2.2.2  Installing a DC Power Supply

You must make space for installing the power supply by removing an existing one (Section E.2.2.1) from a power supply slot available on the switch. Perform the following steps to install a DC power supply.

Step 1  Put on a grounded ESD strap.

Step 2  Unbox the new power supply.

Step 3  Insert the new power supply into the empty power supply slot.

Step 4  After you insert the power supply, push gently on the power supply until the power supply is fully seated and locked in place.

Step 5  Connect the DC-input wires to the appropriate terminals using the specified torque (Table 4-1) in the following order.

a  Ground wire to the Protective Earth (PE) terminal.

b  Negative source DC cable to the negative (- / -48V) terminal.
E.3 Fan Modules

Note
Hot swap fans within 30 seconds to prevent the switch from overheating. Ensure that the module you are replacing matches those already installed in the switch.

E.3.1 Removing a Fan Module

The following steps are required when removing or replacing fans from a switch.

Step 1 Ground yourself with an ESD wrist strap.

Step 2 Push the fan module release lever and slide the fan module out of the switch.

E.3.2 Installing a Fan Module

You must make space for installing the fan module by removing an existing one (Section E.3.1).

Step 1 Remove the replacement fan from its packaging.

Step 2 Slide the new fan module into the switch until the module is fully seated and the release lever snaps into place.

Step 3 Verify that the fan module is working normally.

Note
The fan module status LED should be a steady green for normal operation.
### Regulatory Model Numbers

This appendix lists the regulatory model numbers (RMNs), where applicable, for the product models for the switches described in this document.
