Arista Products vulnerability report for security vulnerability announcement from NGINX on May 31st, 2016

It was announced by NGINX on May 31, 2016 that there is a security update for NGINX. This advisory reports the vulnerability assessment for Arista products.

Vulnerability report for EOS and CVP:

EOS is **vulnerable** to the following:

CVE-2016-4450 (nginx security advisory):

Software versions	All EOS releases starting with 4.12.0F . The list of affected releases is documented in Table-2.
Status	Vulnerable
Affected Features	eAPI and Openstack
Details	A problem was identified in nginx code responsible for saving client request body to a temporary file. A specially crafted request might result in worker process crash due to a NULL pointer dereference while writing client request body to a temporary file.
Resolution	Bug 159252 tracks this vulnerability for EOS. A hotfix patch is available to address this issue. A software fix will be available in upcoming versions for the currently active EOS software trains. This advisory will be updated once the exact SW version is available.

Resolution

959436c5dd084e95bc97317606c41c6b173993becbc13c857e6 secAdvisory0021.swix

NOTE

- This hotfix can be installed on all affected versions of EOS.
- Installing the patch will temporarily disrupt nginx and eAPI sessions when applied
- A reload of the switch is **not required** for the patch to take effect

Instructions to install the patch

1. Download the patch file and copy the file to the extension partition of the switch using one of the supported file transfer protocols:

```
switch#copy scp://10.10.0.1/secAdvisory0021.swix extension:  
switch#verify /sha512 extension:secAdvisory0021.swix
```

Verify that the checksum value returned by the above command matches the provided SHA512 checksum for the file

On modular systems with dual supervisors, download the file to the extension partition of the active supervisor and copy it to the standby supervisor using the following two commands:

```
switch(s1)(config)#copy extension:secAdvisory0021.swix supervisor-peer:/mnt/flash/  
switch(s2-standby)#copy flash:secAdvisory0021.swix extension:
```

2. Install the patch using the extension command. The patch takes effect immediately at the time of installation.

```
switch#extension secAdvisory0021.swix
```

On modular systems with dual supervisors, the patch has to be installed on the active and standby supervisors:

```
switch(s1)#extension secAdvisory0021.swix  
switch(s2-standby)#extension secAdvisory0021.swix
```

If eAPI is enabled, the eAPI agent or the uwsgi service will restart after the patch has been installed.

3. Verify that the patch is installed using the following commands:

```
switch#show extensions
Name                               Version/Release                Status extension
-----
secAdvisory0021.swix              1.6.2/3236644.idburleydev A, I    1
A: available | NA: not available | I: installed | NI: not installed | F: forced
```

4. Make the patch persistent across reloads. This ensures that the patch is installed as part of the boot-sequence. The patch will not install on EOS versions with the security fix.

```
switch#copy installed-extensions boot-extensions
switch#show boot-extensions
secAdvisory0021.swix
```

5. For dual supervisor systems run the above copy command on both active and standby supervisors:

```
switch(s1)#copy installed-extensions boot-extensions
switch(s2-standby)#copy installed-extensions boot-extensions
```

AFFECTED EOS RELEASES:

Vulnerability report for CloudVision Portal (CVP)

CloudVision Portal is only **affected** by the following vulnerabilities:

- **CVE-2016-4450** (nginx security advisory)

This is tracked by bug 159255 which will be fixed in release 2016.1.1.
