Description

Unauthenticated Command Injection vulnerability in VMware SD-WAN Edge by VeloCloud

VMware SD-WAN Edge by VeloCloud contains a command injection vulnerability in the local web UI component. This component is disabled by default and should not be enabled on untrusted networks. VeloCloud by VMware will be removing this service from the product in future releases. Successful exploitation of this issue could result in remote code execution.

VMware would like to thank Cory Mathews, Quentin Rhoads-Herrera, and Maggie Ligon of Critical Start and security researcher Brian Sullivan from Tevora for independently reporting this issue to us.
